

There may be options that may help you afford the Genentech medicine you have been prescribed, no matter what type of health insurance you have.

## If you have commercial health insurance

A Genentech co-pay program can help you with the out-of-pocket costs for your Genentech medicine, if you're eligible.\*

### Commercial health insurance includes:

- ✓ A plan you get through your employer
- ✓ A plan you purchased on your own
- ✓ A plan you purchased through a Health Insurance Marketplace

FDA=US Food and Drug Administration.

\*Eligibility criteria apply. Not valid for patients using federal or state government programs to pay for their medicine and/or administration of their Genentech medicine. Patients must be taking the Genentech medicine for an FDA-approved indication. Please visit the Co-pay Program website for the full list of Terms and Conditions.

## If you have public or commercial health insurance

We can refer you to an independent co-pay assistance foundation that may be able to help you pay for your Genentech medicine.†

An independent co-pay assistance foundation is a charitable organization that gives financial assistance for medicines.

### Public health insurance includes government-sponsored insurance, such as:

- ✓ Medicare
- ✓ Medicaid
- ✓ TRICARE

†Independent co-pay assistance foundations have their own rules for eligibility. Genentech has no involvement or influence in independent foundation decision-making or eligibility criteria and does not know if a foundation will be able to help you. We can only refer you to a foundation that supports your disease state. This information is provided as a resource for you. Genentech does not endorse or show preference for any particular foundation. The foundations in this list may not be the only ones that might be able to help you.
